The Bone Ring Technique – Single-stage vertical augmentation with autogenous bone rings

Training courses with live surgery and hands-on
Frankfurt/Germany, 2012

Course instructors

Dr. Bernhard Giesenhagen,
Frankfurt/Germany

Dr. Orcan Yüksel,
Frankfurt/Germany

The Bone Ring Technique: New perspectives in augmentation

You are a dentist practicing surgery or a maxillofacial surgeon and are experienced with grafting procedures. Now you would like to learn techniques for grafting with autogenous bone-ring transplants.

Discover the potential of a single-session grafting technique. Vertical bone remodeling and implant placement in just one procedure: The bone ring technique can reduce the total healing phase by about five months compared to classical bone-block grafts. This argument is very convincing for your patients and provides you a significant competitive advantage.

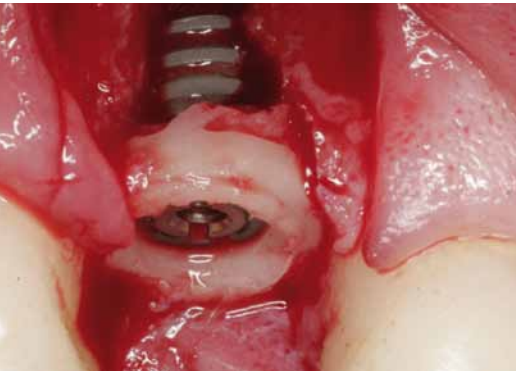

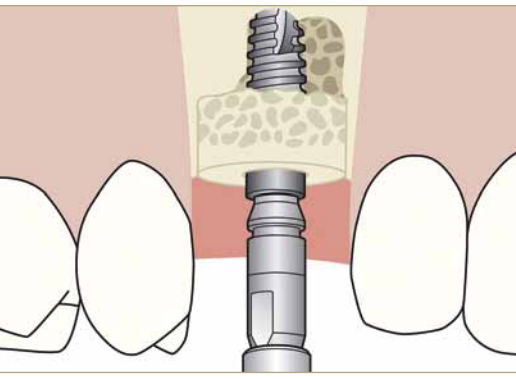

Program

- Theoretical introduction
- Planning the operation
- Step-by-step procedure for bone harvesting, preparation of the recipient site and implant placement
- Soft-tissue management as the basis for restoration of optimum function and esthetics
- Complication management, medication and postoperative care

The course will be held in English language.

**With live surgery and
hands-on session**

Program
